

# “Fast Track Floor Screeds?...

...I use Ardurapid 35 every time!  
Now with the improved formulation  
it has an even longer pot life  
and is much easier to  
apply... excellent!”

For decades Ardurapid 35 has consistently delivered market leading drying and hardening times in a diverse range of businesses and buildings. And now, from the market leaders in fast track flooring systems comes improved formulations of Ardurapid 35 and Ardurapid 35 Screed Mix to make on site work easier and more cost effective.

While both products retain their superior rapid drying and hardening properties, the working time is doubled to 60 minutes, enabling easier application, particularly when pumping. Because of the use of well graded aggregate in combination with Ardurapid 35 cement, Ardurapid 35 Screed Mix now has a reduced minimum thickness for bonded and unbonded applications compared to conventional screeds, reducing the cost per m<sup>2</sup>.

So for the ultimate in problem free fast track screeding use Ardurapid 35 and Ardurapid 35 Screed Mix as part of the Ardex fast track screeding system and lay floorcoverings between 4 and 24 hours!
